Potato Seed Balls—One-half Size

Coffee Berry

The Tomato Grape can easily be trained to an arbor, trellis or fence like a grape vine. It grows rapidly and will produce ripe fruit in a few months from seed; fruit is about the size of a Concord Grape, but of Tomato flavor, and is fine for cooking and canning and exceptionally good for preserving. Plants grow very rapidly and should be cared for same as Tomatoes. Pkt., 6c; 3 pkts., 15c.

Japanese Radish—The skin is pure white, flesh firm and solid, mild as an apple. Thrives in any soil or location. The taste is more delicate than our American Radish. It is always crisp and tender, and at the same time is one of the greatest curiosities ever grown in the garden. On account of its mild and excellent flavor, can be sliced and eaten like an apple. Pkt. 6c; 3 pkts., 15c.

Garden Lemon

Somewhat resembles the Vegetable Orange in growth but is distinct, the unripe fruit is striped with very dark green, and when ripe is not so yellow. The fruit is the shape shown in the illustration, but a little larger than the Vegetable Orange. It has fine flesh and is of good flavor and is unequalled for general canning purposes. It should be cultivated the same as nuskemelons. Pkt., 5c; 3 pkts., 12c.

Domestic Coffee Berry

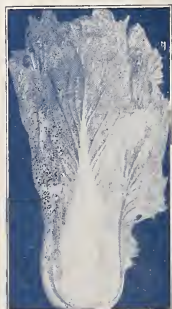

This Berry or Bean is easily grown in any garden soil and very prolific. The plant grows very strong, producing pods containing the coffee berries. It makes an excellent drink, nearly equal to Java coffee. It can be planted in May and cared for the same as beans, and will be found as good a substitute for coffee as any cereal used. Do not fail to plant a few in your garden. Pkt. 5c; 3 pkts., 12c.

Cabbage—New Pe-Tsai

Chosen—Big, compact, tender and crisp, an excellent Pe-Tsai. Will not scald or burn and will make a head when other varieties fail. It will produce a head of 15 pounds and will stand long before belting to seed. We recommend it either for the market gardener, trucker or private planter, as it is a perfect CHINESE PE-TSAI Cabbage in every respect, not only of the largest size but of handsome color and of the finest quality. It is probably the safest variety for an amateur to plant and one is almost sure of getting a crop. Pkt., 10c.

Chameleon Egg Plant

An interesting plant less decorative by its flowers than by its fruits, which are rather large, but flattened, and have strong ribs, similar to a tomato of the old type. This new Tri-Col. or Egg Plant pass from white to an intensive yellow; later into a brilliant scarlet, changing color like a chameleon, producing fruits in abundance. They keep well and there are always fruits of the three different colors on the plant. Pkt., 6c; 3 pkts., for 15c.

Smith's Imperial White Bean

The Bountiful Bush Bean—We believe that it is a distinct improvement in green beans and will become exceedingly popular wherever grown. It is a prolific and continuous bearer, absolutely stringless, very tender and of excellent flavor. The plant is very handsome, thrifty in growth, being practically rust and mildew proof. It is extremely early, being the first in spring, and it is the last to yield edible pods in the fall from mid-summer's sown seeds, which have produced plants that are still in pod and blossom. One of the grand points of this new bush bean is in the rich green pods, which are of an enormous size, broad, thick, very long, uniform in shape, meaty and of high quality, absolutely stringless and free from any tough lining, not only when young, but this tender quality is retained to maturity. Per pkt., 6c; 3 pkts, 15c; ¼ lb., 15c; ½ lb., 25c; 1 lb., 45c; postpaid.

Many a family has longed for the old fashioned Boston Baked Beans and here they are; try a few, if no more, this season, and they will please far beyond your anticipations. Vines are very productive, compact, upright, and can be used as a bush or pole bean. Pods medium length, cylindrical, curved, with splashes of bright red on a yellow ground.

They become fit for use as green shelled beans very early and in this condition the beans are very large, easily shelled and are about equal to the Lima in quality, although quite different in form. Cornell No. 11 Dent Corn

This wonderful Dent Corn was originated by Cornell College, and has proven by far one of the best dent or western Corns offered to the farmer. It has a good size ear (see cut), very small cob, which makes husking very easy, 12 to 14 rows, deep kernels, rich yellow and dry matter superior to that of most others. Stalks are of medium height, very fine quality and producing from one to three ears on each stalk. One of the best Silo Corns known, and so early that in most cases will mature for husking, and when it does mature it becomes very hard, kernels making a good keeper throughout the year.

Owing to the small cob and deep kernels, it will outrun any other in shelled corn per bushel of ears. We advise all our customers to try it. Our stock is extra fine this season, although somewhat limited, and we advise all to place your orders at once. Postpaid, per lb., 40c.

NORTHERN WHITE OATS

This is a variety that is particularly suited to all oat growers. We find this variety of Oats possessing the features necessary for best results in all sections. It is an extremely heavy cropper and straw very strong. It is a "tree" Oat and is less liable to lodge than any variety we have offered, and with the extra heavy yields obtained from this variety it would well repay a farmer to sow it even if he were obliged to pay considerable more for the seed than for ordinary varieties.

Perhaps the best description of this variety would be to say that it is an improved strain of many of the Northern Oats, and is a much heavier yielder. Lb. 35c, postpaid. By express or freight not prepaid, peck, 50c; $\frac{1}{2}$ bu. 90c; bu. \$1.75.

Ever-Blooming Annual Hollyhocks—We have recently secured a cured seed of Ever-blooming Hollyhocks. They are easily grown from seed and commence flowering in about 12 weeks and continue until killed by frost. On account of blooming the first season they are more desirable than any other Hollyhock; can be started in the house or hot beds in March or April, or sown in the open ground in May. Plants set out in May will commence blooming in July and will produce an abundance of bloom throughout the season. This Annual Hollyhock is a wonderful free flowering sort. The focus and colors among the flowers would be a surprise to anyone. They are produced in double, semi double flowers, some with smooth edged petals, while others are fringed and of various shapes and shades. Flowers are usually very large. Plants strong, vigorous and of branching habit. To get best results plant in rich soil and keep well watered.
